Respectful representatives,

I am contacting you regarding the open position: "Mechanical Design Engineer", which was informed to me by LinkedIn. I strongly believe that my background in Mechanical Engineer (not only academically, but professionally) makes me a perfect candidate for this position.

As you will see from my resume, I have been involved in numerous Mechanical Engineering projects in *Mabe TyP*, which is one of the biggest appliances companies in the world, with an alliance with *General Electric Appliances*. The most outstanding project in which I participated was the design of a new *strike & latch* for one of our electric dryers. I was in charge of the dimensional and tolerance analysis, as well as with prototyping and analyzing the data out of the tests in order to improve the design. As a result, the mechanism was approved for production in more than 1 million units annually. I consider myself to be an outstanding professional for my attitude, leadership, resilience and hardworking.

I would like to answer any question that you may have regarding my background. I look forward to meeting you to further discuss this opportunity.

Sincerely,

Francisco Garcia
